DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4, drawn to a method for improving blood supply through a graft, classified in class 435, subclass 2.
- II. Claims 5-8, drawn to a method for improving blood supply to a transplanted tissue, classified in class 435, subclass 1.2.
- III. Claims 9-12, drawn to a method for treating Raynaud's syndrome, classified in class 424, subclass 239.1.

The inventions are distinct, each from the other because of the following reasons:

Although there are no provisions under the section for "Relationship of Inventions" in M.P.E.P. § 806.05 for inventive groups that are directed to different methods, restriction is deemed to be proper because these methods appear to constitute patentably distinct inventions for the following reasons: Groups I-III are directed to methods that are distinct both physically and functionally, and are not required one for the other.

Group I is drawn to a method for improving blood supply to a graft comprising the step of administering botulinum toxin to a blood vessel **at or in the vicinity of** a graft; Group II is drawn to a method for improving blood supply to a transplanted tissue comprising the step of administering botulinum toxin to a blood vessel **which supplies** a transplanted tissue. These Groups are drawn to similar processes, as a graft is

Application/Control Number: 10/754,364

Art Unit: 1651

defined as "a portion of living tissue surgically transplanted from one part of the individual to another, or from one individual to another, for its adhesion and growth" (reference U). The method of Group II, therefore, is a more specific embodiment of Group I, as the method of Group I simply requires administration of botulinum toxin be administered to any blood vessel at or in the vicinity of a graft.

If the term "graft" is interpreted to refer only to blood vessel grafts (as is suggested in Example 4), restriction is still proper as Group I is drawn to a method for improving blood flow through a grafted vessel, while Group II is drawn to a method for improving blood flow through a patient's own blood vessels to any transplanted tissue.

Group III is distinct from both Group I and Group II in that it is drawn to a method for treating a specific vascular disorder. Treatment of a disease state is by definition more complicated than improving a single function of a single organ or tissue. Diseases generally have multiple symptoms that are unrelated, and evaluating the success of methods drawn to treating diseases is complex.

Therefore, a search and examination of all three methods in one patent application would result in an undue burden, since the searches for the methods are not co-extensive, the classification is different, and the subject matter is divergent.

This application contains claims directed to the following patentably distinct species of the claimed invention: botulinum toxin types A, B, C, D, E, F and G.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 3, 7 and 11 are generic.

Application/Control Number: 10/754,364

Art Unit: 1651

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1651

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lora E Barnhart whose telephone number is 571-272-1928. The examiner can normally be reached on Monday-Friday, 8:00am - 4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael G Wityshyn can be reached on 571-272-0926. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
